

# Unified Crypto Infrastructure for Asset Managers

Most crypto platforms focus on individual components of the stack. **sFOX Connect unifies trading, liquidity, and qualified custody into a single infrastructure layer designed for asset managers.**

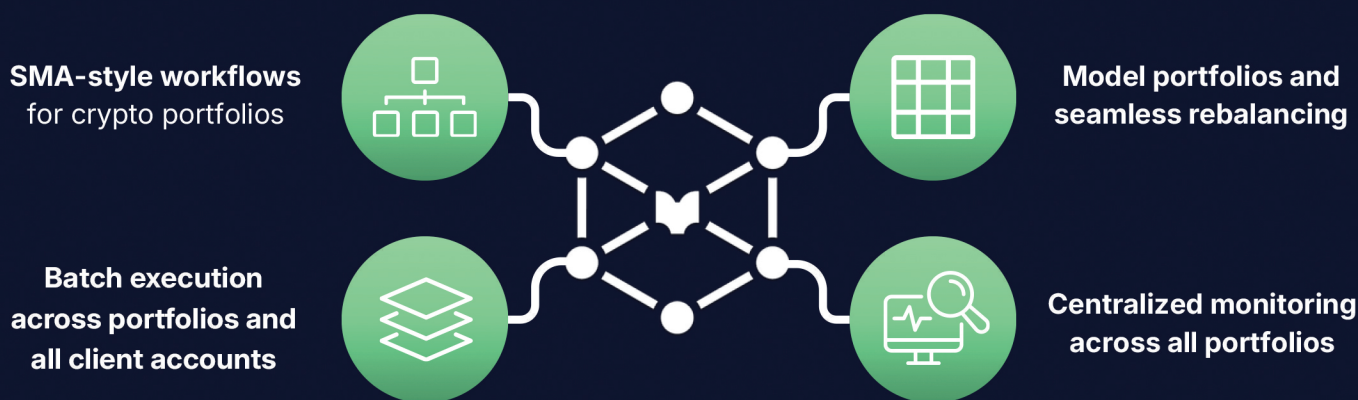

## What Makes sFOX Connect Different

Instead of stitching together multiple vendors or rebuilding your platform, sFOX Connect gives asset managers a single foundation purpose-built for managing crypto inside portfolios. At its core, sFOX Connect delivers:

## Manage Digital Assets Like Every Other Asset Class

sFOX Connect integrates crypto directly into portfolio workflows so digital assets are managed as governed allocations, not standalone systems.

Crypto becomes part of the asset management portfolio, not a sidecar exposure.

## Execution Built for Fiduciary Oversight

sFOX Connect delivers consistent, defensible execution by unifying liquidity access and custody within the same infrastructure layer.

-  Access **40+** exchanges, OTC desks, and market makers
-  Smart routing to reduce slippage and signaling
-  Trade directly from qualified Wyoming Trust custody

## Controls Native to the Infrastructure

Security and compliance controls, approvals, and reporting are embedded, not bolted on.

SOC 2-aligned operational safeguards

Native KYC/AML workflows

Automated daily trade and revenue reporting

## Why Leading Asset Managers Partner with sFOX

Since 2014, sFOX has provided the infrastructure that institutions rely on for deep liquidity and reliable execution.

### Zero Infrastructure Rebuild

Move from decision to launch in days by leveraging your existing technology stack

### Customizable Monetization

Capture value through customizable transaction spreads and fees native to the operating layer

### Reduced Complexity

Eliminate the need to hire specialized engineering teams or rethink your operating model
