

# SETTLEMENT AND LIQUIDITY INFRASTRUCTURE FOR MODERN PAYMENT FLOWS

## THE INSTITUTIONAL EXECUTION & LIQUIDITY LAYER FOR MODERN PAYMENT STACKS

**Power crypto-native payments with institutional-grade execution and liquidity.**

sFOX Connect integrates with your existing banking and payout systems, streamlining the flow of value across fiat and digital asset rails without requiring you to rebuild your infrastructure.

### THE sFOX CONNECT ADVANTAGE: ENHANCE, DON'T REPLACE.

sFOX Connect operates behind your existing fiat rails, local on- and off-ramps, and banking infrastructure. We serve as the dedicated execution and liquidity layer, optimizing the flow of value without requiring a system rebuild.

You already have local banking partners, on- and off-ramps, and payment infrastructure. What is missing is optimization:

Aggregated Liquidity

Intelligent Execution

Price Optimization at Scale

Counterparty Risk Mitigation

## SUPERIOR OPTIMIZATION & EXECUTION

**Maximize Every Transaction:** We aggregate liquidity across more than 30 venues and execute at the best available price, significantly reducing slippage and improving FX outcomes for each payment.

**Seamless Fiat-Crypto Bridge:** Transfer funds efficiently between traditional banking and digital assets. We manage FX and stablecoin processes for real-time cross-border payouts and fiat on- and off-ramps.

**Optimize Cross-Border Flows:** Enhance your payout infrastructure with stablecoin-based settlement faster, more transparent, and more cost-efficient flows. This solution is designed for regions with fragmented infrastructure and wide FX spreads, such as LATAM.

## OPERATIONAL EFFICIENCY & SPEED

**Launch in Days, Not Months:** Avoid infrastructure delays and accelerate your market entry with our developer-friendly API and detailed integration guides.

**Operations on Autopilot:** Eliminate manual reconciliation with general ledger-ready feeds, real-time dashboards, and automated dispute workflows so your finance team can focus on strategic initiatives.

## INSTITUTIONAL TRUST & RISK MITIGATION

Payments require speed, trust, and risk separation. We deliver institutional-grade controls:

**Custody Separation via SAFE Trust:** Client assets are held in a bankruptcy-protected, segregated account and are not subject to trading activity.

**Best Execution:** Our smart routing avoids overexposure to any single exchange or liquidity provider.

**Enterprise-Grade Security:** Features include PCI-compliant vaulting, SOC 2-aligned controls, and end-to-end encryption.

**sFOX Connect offers a single, universal API to integrate and optimize your existing payment rails, improving execution, efficiency, and control.**
